

1. A graphical user interface adapted to browse and retrieve pictures stored in a digital image database, said graphical user interface comprising:

a first display level constructed with the aid of decoded metadata, said first display level comprising a first metaphor representing the span of time over which pictures stored in said database were captured, and a plurality of first icons placed on said first metaphor representing predefined temporal intervals, said first icons being proportionately sized to correspond to the number of pictures captured during a predefined temporal interval; and

2. The graphical user interface of Claim 1, wherein the time intervals represented by said first icons correspond to years, and said second icons correspond to months, according to decoded metadata.

4. The graphical user interface of Claim 3, further comprising:

5. The graphical user interface of Claim 1, wherein the time presented by said first icons correspond to years, and said second icons identified events during which pictures are captured, according to data.

6. The graphical user interface of Claim 5, wherein the display and second metaphor is substantially perpendicular to the display position of the first metaphor.

7. The graphical user interface of Claim 1, wherein the time presented by said first icons correspond to years, and said second icons identified locations from which pictures are captured, according to data.

8. The graphical user interface of Claim 1, wherein the time presented by said first icons correspond to years, and said second icons identified people present in pictures, according to decoded meta-

9. The graphical user interface of Claim 1, wherein the time presented by said first icons correspond to decades during which pictured, and said second icons correspond to years during which pictured, according to decoded metadata.

10. The graphical user interface of Claim 1, further comprising a display level constructed with the aid of decoded metadata, linked to a display level and triggered by activating one of said second icons, said display level comprising additional level thumbnail icons of the pictures selected by the activated second icon.

11. The graphical user interface of Claim 1, wherein the time presented by said first icons correspond to years and said second icons months, according to decoded metadata, said graphical user interface comprising an additional display level constructed with the aid of data, linked to said second display level and triggered by activating said second icons, said additional display level comprising additional level as of the pictures represented by the activated second icon.

12. The graphical user interface of Claim 3, further comprising a display level constructed with the aid of decoded metadata, linked to an advertisement level and triggered by activating one of said third icons, said advertisement level comprising additional level thumbnail icons of the pictures associated with the activated third icon.

13. The graphical user interface of Claim 4, further comprising a display level constructed with the aid of decoded metadata, linked to a play level and triggered by activating one of said fourth icons, said display level comprising additional level thumbnail icons of the pictures selected by the activated fourth icon.

14. The graphical user interface of Claim 1, wherein the time presented by said first icons correspond to years, and said second icons identified events during which pictures are captured, according to data, said graphical user interface further comprising an additional icon constructed with the aid of decoded metadata, linked to said second icon and triggered by activating one of said second icons, said additional

display level comprising additional display level thumbnail icons of the pictures represented by the activated second icon.

15. The graphical user interface of Claim 1, wherein the time intervals represented by said first icons correspond to years, and said second icons correspond to identified locations from which pictures are captured, according to decoded metadata, said graphical user interface further comprising an additional display level constructed with the aid of decoded metadata, linked to said second display level and triggered by activating one of said second icons, said additional display level comprising additional display level thumbnail icons of the pictures represented by the activated second icon.

16. The graphical user interface of Claim 1, wherein the time intervals represented by said first icons correspond to years, and said second icons correspond to identified people present in pictures, according to decoded metadata, said graphical user interface further comprising an additional display level linked to said second display level and triggered by activating one of said second icons, said additional display level comprising additional display level thumbnail icons of the pictures represented by the activated second icon.

17. A method of producing a graphical user interface (GUI) adapted to browse and retrieve pictures stored in a digital image database, said method comprising the steps of:

decoding metadata stored in digital image files;

providing a first GUI level constructed with the aid of decoded metadata, said first GUI level comprising a first metaphor representing the span of time over which pictures stored in said database were captured, and a plurality of first icons placed on said first metaphor representing predefined temporal intervals, said first icons being proportionately sized to correspond to the number of pictures captured during a predefined temporal interval; and

providing at least a second GUI level constructed with the aid of decoded metadata, linked to said first GUI level and triggered by activating one of said first

icons, said second GUI level comprising a second metaphor, and second icons placed on said second metaphor for grouping the pictures represented by the activated first icon, said second icons being proportionately sized to correspond to the number of pictures captured for each grouping.

18. The method of Claim 17, wherein the time intervals represented by said first icons correspond to years, and said second icons correspond to months, according to decoded metadata.

19. The method of Claim 18, further comprising the step of:
providing at least a third GUI level constructed with the aid of decoded metadata, linked to said second GUI level and triggered by activating one of said second icons, said third GUI level comprising a third metaphor, and third icons placed on said third metaphor for grouping the pictures represented by the activated second icon by the day of the week of capture, said third icons being proportionately sized to correspond to the number of pictures captured for each grouping.

20. The method of Claim 19, further comprising the step of:
providing at least a fourth GUI level constructed with the aid of decoded metadata, linked to said third GUI level and triggered by activating one of said third icons, said fourth GUI level comprising a fourth metaphor, and fourth icons placed on said fourth metaphor for grouping the pictures represented by the activated third icon by the time of day of capture, said fourth icons being proportionately sized to correspond to the number of pictures captured for each grouping.

21. The method of Claim 17, wherein the time intervals represented by said first icons correspond to years, and said second icons correspond to identified events during which pictures are captured, according to decoded metadata.

22. The method of Claim 21, wherein the display position of metaphor is substantially perpendicular to the display position of said

23. The method of Claim 17, wherein the time intervals represented by the first icons correspond to years, and said second icons correspond to months; and wherein the time intervals from which pictures are captured, according to decoded meta-

24. The method of Claim 17, wherein the time intervals represent first icons correspond to years, and said second icons correspond to people present in pictures, according to decoded metadata.

25. The method of Claim 17, wherein the time intervals represented by the first icons correspond to decades during which pictures are captured, and the second icons correspond to years during which pictures are captured, and the decoded metadata.

26. The method of Claim 17, further comprising the step of:
 ing an additional GUI level constructed with the aid of decoded
 ed to said second GUI level and triggered by activating one of said
 said additional GUI level comprising additional GUI level thumb-
 ne pictures represented by the activated second icon.

27. The method of Claim 17, wherein the time intervals representing first icons correspond to years and said second icons corresponding to decoded metadata, said method further comprising the step

ing an additional GUI level constructed with the aid of decoded
ed to said second GUI level and triggered by activating one of said
said additional GUI level comprising additional GUI level thumb-
e pictures represented by the activated second icon.

28. The method of Claim 19, further comprising the step of:
providing an additional GUI level constructed with the aid of decoded metadata, linked to said third GUI level and triggered by activating one of said third icons, said additional GUI level comprising additional GUI level thumbnail icons of the pictures represented by the activated third icon.

29. The method of Claim 20, further comprising the step of:
providing an additional GUI level constructed with the aid of decoded metadata, linked to said fourth GUI level and triggered by activating one of said fourth icons, said additional GUI level comprising additional GUI level thumbnail icons of the pictures represented by the activated fourth icon.

30. The method of Claim 17, wherein the time intervals represented by said first icons correspond to years, and said second icons correspond to identified events during which pictures are captured, according to decoded metadata, said method further comprising the step of:

providing an additional GUI level constructed with the aid of decoded metadata, linked to said second GUI level and triggered by activating one of said second icons, said additional GUI level comprising additional GUI level thumbnail icons of the pictures represented by the activated second icon.

31. The method of Claim 17, wherein the time intervals represented by said first icons correspond to years, and said second icons correspond to identified locations from which pictures are captured, according to decoded metadata, said method further comprising the step of:

providing an additional GUI level constructed with the aid of decoded metadata, linked to said second GUI level and triggered by activating one of said second icons, said additional GUI level comprising additional GUI level thumbnail icons of the pictures represented by the activated second icon.

09742028 122000

32. The method of Claim 17, wherein the time intervals represented by said first icons correspond to years, and said second icons correspond to identified people present in pictures, according to decoded metadata, said method further comprising the step of:

providing an additional GUI level constructed with the aid of decoded metadata, linked to said second GUI level and triggered by activating one of said second icons, said additional GUI level comprising additional GUI level thumbnail icons of the pictures represented by the activated second icon.
